Energy Efficiency, Health
& Sustainability

beinspired

Minto has created a new standard for energy efficiency, health and sustainability in its new homes. With model homes designed, constructed and certified to the rigorous standards of the following five agencies and the opportunity to purchase homes to these same specifications, Minto has set a new standard for energy performance, health and sustainability with its homes. This means increased savings, better health and living to you.

Energy Star® Homes

These homes include energy features that typically make them 20-30% more efficient.

LEED® (Leadership in Energy and Environmental Design)

Rating for green features such as energy efficiency, enhanced indoor air quality, water efficiency and sustainable use of materials and land.

FPL BuildSmart®

Certified to be a higher standard of energy efficiency, up to 30% more efficient than homes that simply comply with the Florida building code.

NAHB™ (National Association of Homebuilders) National Green Building Certification Program

Assures homeowners and the community that projects meet either the NAHB model green building guidelines or The International Code Council (ICC) National Green Building Standard and are truly green.

FGBC (Florida Green Building Coalition)

Dedicated to improving the "build" environment. The FGBC's mission is "to lead and promote sustainability with environmental, economic and social benefits through education and certification programs.
